

RQplus

- A requirements management capability

Do you want to know how some of the leading procurement agencies and industries in the Nordic region are managing their requirements?

RQplus

RQplus

Syntell has developed a Requirements Management (RM) capability called RQplus, which has been successfully implemented in both procuring organizations and in the supplier industry. It is the collected best practices from more than a decade of requirements management experiences in an acquirer/supplier context.

Your challenge

You need a simple way of communicating requirements and verification data with suppliers and customers.

You want to reduce the need to educate your staff in using difficult tools.

You want your staff to focus on writing the requirements rather than working with difficult tools.

You need a way to prevent your suppliers to respond "We comply – but...".

You have come to the conclusion that capability is not reached by just purchasing yet another tool.

You have the need to make sure that your requirements database always corresponds to written specifications and signed agreements.

You feel that evaluation of bids takes too much effort and time.

You want a fast way to implement an enhanced capability to manage requirements.

If one or more of the above statements are applicable to you, and you want to explore a cost effective

way of tackling your challenges, then RQplus can be the solution.

Deliverables

Syntell can enhance your capability to manage requirements by providing a variety of services depending on your needs:

- Assessment of your RM capability – providing you the means to make decisions on where to improve.
- Assessment of your tool environment. If you are using DOORS today, DEx Toolkit may be an option to enhance your tool performance.
- RM outsourcing – Syntell manages your requirements while you focus on writing them.
- Process and methods improvement – expert consulting in implementing new capability.
- Training and coaching – supporting your staff in working according to improved methods.
- Operational support in your projects.

Why Syntell?
